Animals and their young

Read the following information about animals and their babies.

Mammals grow inside their mother's womb. When they are born they look like their parents only smaller.

Their mothers feed them with milk and take care of them as they grow.

When they are growing their bodies get bigger and stronger until they can care for themselves.

Most amphibians, like frogs, lay eggs in the water.

When they hatch, the tadpoles live underwater until they grow into frogs.

Now answer the following questions.

1. How are mammals grown?

.....
.....

2. What do the mothers feed them with?

.....
.....

3. What happens to the babies as they grow?

.....
.....

4. Where do amphibians lay their eggs?

.....
.....

5. Name an amphibian.

.....
.....
